SUMMARY

Computer Science Engineering student with hands-on experience building full-stack web applications, AI-powered systems, and real-time platforms. Skilled in Next.js, TypeScript, Python, PostgreSQL, Redis, and REST APIs, with a strong interest in software engineering and system design.

TECHNICAL SKILLS

- Languages: Python, Java, JavaScript, TypeScript, HTML, CSS
 - Frontend: React.js, Next.js, Tailwind CSS, Vite
 - Backend: Node.js, Express.js, Flask, Spring Boot, Socket.IO, tRPC
 - Databases: PostgreSQL, MongoDB, Redis, Supabase
 - AI/ML: Scikit-learn, RAG Pipelines, Vector Search, Gemini API, Qdrant
 - Tools & Technologies: Git, Docker, Prisma ORM, NextAuth.js, Vercel, Render
 - CS Fundamentals: DSA, OOP, DBMS, Operating Systems, Computer Networks
-

PROJECTS

[StudySync](#) | [Live Demo](#) | Full-Stack AI Learning Platform

- Developed an AI-powered learning platform enabling document analysis, automated quiz generation, intelligent tutoring, and contextual question answering.
- Architected a secure full-stack system with Google OAuth, Next.js, Prisma, PostgreSQL, Redis, and NextAuth.js.
- Implemented RAG pipelines, vector search, and containerized deployment with Docker, Supabase, and Render to deliver scalable AI-driven learning experiences.

[SyncTalk](#) | [Live Demo](#) | Real-Time Chat Application

- Developed a real-time chat platform using React, Node.js, Express.js, Socket.IO, and MongoDB, supporting room-based messaging, persistent chat history, and responsive UI experiences.
- Engineered WebSocket communication, API integration, and scalable full-stack architecture with features including room management and dark/light mode.

[SyncSolve](#) | [Live Demo](#) | Full-Stack Puzzle & Strategy Platform

- Built a full-stack platform for Sudoku solving, Chess position analysis, and interactive puzzle-solving tools using Next.js, React, TypeScript, Java, Spring Boot, and Tailwind CSS.
- Implemented optimized backtracking algorithms, puzzle validation engines, and RESTful APIs for real-time processing and seamless frontend-backend integration.
- Deployed a responsive and scalable application on Vercel and Render, emphasizing full-stack development, algorithm design, system architecture, performance optimization, and extensibility.

[Car Price Prediction System](#) | [Live Demo](#) | Machine Learning Web App

- Developed a machine learning web application using Flask and Scikit-learn to predict used-car prices based on vehicle attributes.
 - Performed data preprocessing, feature engineering, and model training to improve prediction accuracy and reliability.
 - Integrated the trained model with a responsive web interface, enabling real-time price estimation for end users.
-

EDUCATION

JNTUH College of Engineering Hyderabad

Bachelor of Technology (B.Tech) in Computer Science Engineering | 2024 – Present

Kendriya Vidyalaya CRPF

Senior Secondary Education (CBSE – MBPC) | 2022 – 2024

ACHIEVEMENTS

- National-level athlete in Kho-Kho and Badminton.
 - Ranked among top performers in college hackathons.
 - Maintained multiple full-stack and AI projects with 300+ commits across public repositories.
 - Solved 200+ DSA problems on LeetCode and coding platforms
-

CERTIFICATIONS

- **Kshitij IIT Kharagpur:** Artificial Intelligence Course
 - **Google:** AI Essentials, Prompting Essentials, AI Professional, Data Analysis with Python, IoT & Cybersecurity
 - **IBM SkillsBuild:** Generative AI, RAG & Agentic AI, AI for Software Development
 - **Microsoft:** Power BI Data Analytics
-

INTERESTS

Software engineering, full-stack development, AI-powered applications, open-source development, hackathons, system design, music, cooking, and continuous learning.
